

Do you/your child have a diagnosis of constipation?

Constipation in young people can not only be a physical burden but can also impact on quality of life.

The South Thames Paediatric Network are striving to improve the care of all children/young people with constipation across S London / SE England.

If you or your child is aged 2 -18, we would value your time in filling out a questionnaire* so that we can better understand how constipation affects the quality of your/your child's life.

Please scan the QR code to access the questionnaire.
The questionnaire can be completed by both child/young person and accompanying family member/adult.

*All responses will be kept completely confidential
