Generics are available

Formulations that may help patients who struggle to swallow tablets/capsules:

- Oral Suspension (Zonegran) 20mg/ml

Below are the brand leader or originator of the currently licensed anti-seizure medication for treating epilepsy in children and adults and alternative formulations available for those unable to swallow tablet or capsules. The size and shape of tablets and capsules can impact on a patient's ability to swallow them. The photos and measurements of the tablets and capsules are there to aid formulation choice. Please note that generic versions of these products are available for most actives, but they may differ in size and shape.

## CATEGORY 3<sup>1</sup>

For these drugs, it is usually unnecessary to ensure that patients are maintained on a specific manufacturer's product unless there are specific reasons such as patient anxiety and risk of confusion or dosing errors.

### BRIVARACETAM

**Briviact Tablets**

Formulations that may help patients who struggle to swallow tablets/capsules:

- Oral Solution (Briviact) 10mg/ml
- Injection/Infusion (Briviact) 10mg/ml

Supporting healthcare professionals, patients and their families and carers through educational resources

### WE KNOW ...

That for anti-seizure medications (ASMs), the choice of active ingredient is important... but so is the formulation.

### WHICH MEANS ...

- For new ASM initiations, there should be an informed decision made on the best formulation of the chosen active ingredient in order to optimise the outcomes for that patient.
- Not all formulations contain the same excipients. Excipients are particularly important for children, for example products may contain alcohol, colouring agents or preservatives. See Swallowingdifficulties.com below for more information.
- For continuity of care, the specialist's choice of formulation should be adhered to on renewing and fulfilling the prescription.
- On reviewing patients - if they are not seizure free - consideration should be given to whether they are on the optimal formulation of that active ingredient to optimise their outcomes.

## Swallowing Difficulties
